

Affordable Circulation For Better Water Quality

The AerationPlus® is a completely submerged air-powered aerator circulator for areas where aesthetics are important. There are no moving parts or electricity in the water and it is safe to operate in high-use areas.

The AerationPlus® is a perfect circulation solution for:

- Docks & marinas
- Swimming areas
- Stormwater retention basins
- Private lakes & ponds
- Park & golf course ponds & waterscapes

Easy to deploy. Easy to maintain. Easy on the wallet.
Can be up & running in less than an hour!

Everything you need is in the box!

The AerationPlus® Base Package includes:

- 1) AerationPlus® (Model 1800 or Model 2800)
- 2) Ultra-Quiet Air Unit (Standard or Deep Water Options)
- 3) 100 feet weighted in-water air hose
- 4) 10 feet stainless steel chain
- 5) 50 feet on-shore air hose
- 6) Concrete Anchor
- 7) Timer Controller

Standard Air Pump

Air hose shallower than 10 feet.

For best results, set the AerationPlus® to circulate just above the thermocline.

Models

Model 1800

Circulation for 1 to 5 surface acres.

Model 2800

Circulation for 3 to 8 surface acres.

Air Units

Standard Air Pump

For total depths less than 10 feet.

Deep Water Compressor

For total depths greater than 10 feet.

Deep Water Compressor

Air hose deeper than 10 feet.

*The thermocline is a point of significant temperature stratification that usually occurs approx. 3 to 6 feet in shallower waterbodies.

***Thermocline**
